Student growth and achievement happens beyond the traditional school day. The time that youth spend during out-of-school time (OST) is important to their overall healthy development and presents important opportunities for them to get connected to the right resources. These programs have been especially important during the COVID-19 pandemic, and have served as an important bridge in different ways.

Because the OST community is diverse, some programs have been able to provide safe, modified in-person programming opportunities at their own facilities or outdoors. Others, either because they do not have access to facilities (DCPS has not allowed OST programs to use school facilities) or because of health and safety concerns, exclusively offer virtual learning. All are committed to meeting the needs of families and youth and have worked to build and maintain community, support distance learning, and connect families to basic resources.

**ONE THING IS CLEAR:**
**OUT-OF-SCHOOL TIME PROGRAMS ARE AN INTEGRAL PART OF OUR LOCAL EDUCATION SYSTEM**

Out-of-school time programs play an important role in bridging the gap between schools and communities by ensuring that young people have safe and supportive environments to demonstrate the skills and competencies that will create limitless possibilities for their future.

To truly reach its fullest potential, District leaders must commit to maintaining funding for this important sector during the pandemic, and make long-term public investments so that all students can benefit from these valuable spaces.

By closing gaps in data collection, improving access to quality programming, and ensuring that all families and community-based organizations are a part of the conversations that shape our system, especially during the pandemic, we can better support all children in their pursuit of a more prosperous life.
WHAT IS OUT-OF-SCHOOL TIME?

Research estimates that young people can spend up to 5,000 waking hours out of school each year.¹ The time young people spend participating in activities that enrich their lives before and after school and during the summer months is referred to as out-of-school time (OST). In DC, out-of-school time activities available to young people range from music, arts, and cultural activities to sports, robotics, debate, and tutoring, to name a few.

This report looks at programs that receive public support, and does not look at programs that only rely on philanthropic or private funds. It is also worth noting that we do not include the Marion Barry Summer Youth Employment Program in our analysis. However, as a widely popular resource for young people to develop life-long skills and earn income, the benefits of this program cannot be overemphasized in its ability to promote youth autonomy and success. It serves youth 14-24 and is better categorized as a youth workforce program.

For many youth, out-of-school time programs can serve as a vital resource for building strong relationships that support their lifelong growth and development. OST has become even more important during the COVID-19 crisis. We know that the pandemic has worsened education inequities. OST is vital to closing these divides and it is critical that we maintain the program infrastructure that families, children, and youth rely on.

WHY IT MATTERS

Public research shows well-structured environments where children can explore their individual interests and capabilities can serve as important opportunities for them to develop confidence, self-efficacy, and a sense of belonging in peer groups.² For students of color, who often face bias and discrimination as they navigate the world, building this sense of community and safety is essential to their success in school and in life.

As a matter of equity, expanding access to high-quality out-of-school time opportunities must include understanding DC’s complex history of exclusionary policies and practices towards Black and Latinx youth and provide ample opportunities for their cultural capital to be celebrated. In recent years, local efforts to address the use of exclusionary discipline practices have resulted in more attention paid to positive school climate and culture. Yet it is also worth noting that one of the most common spaces where students are afforded opportunities to learn restorative practices and receive specialized support in social-emotional development happens to take place during expanded or extended learning time. Indeed, the out-of-school time space continues to be an important outlet for youth to develop skills and competencies in an environment where they feel most safe and supported.

¹. Ed100
HOW OST WORKS

The DC government has a long history of supporting OST because of the widely recognized value that extended learning opportunities provide. Previously, these programs were supported by the DC Children and Youth Investment Trust Corporation which was established in 1999 but dissolved in 2016. The Office of Out-of-School Time Grants and Youth Outcomes was created in the Trust’s place. The OST Office, along with the United Way of the National Capital Area, were responsible for distributing funds until Learn 24 was launched in 2018, eventually phasing out the United Way’s role in the process.

Separate from this, federal funding supported some programs, DC Public Schools (DCPS) provided some afterschool and summer program funding, and some individual traditional and charter schools found money in their budgets for OST programming.

Because of this, the OST landscape is complex. Programs can be located at schools, community-based organizations, or recreation centers, and programs at schools may be run by the school itself or by an organization with which the school partners.

Some sites only have before or afterschool programs, others only have summer programs, and others offer both (sometimes through different funding streams).

OUTCOMES OF EXPANDED LEARNING

- **Academic Performance**
  Expanded learning helps kids increase test scores and get better grades.

- **Attendance & Participation**
  Expanded learning helps kids stay in school and bring essential skills to the classroom.

- **Social & Emotional Development**
  Expanded learning uniquely contributes to kids’ positive growth and success in life.

- **Fitness & Wellness**
  Expanded learning helps instill physical, mental, and behavioral habits for kids to lead a healthy life.

For more detail on these outcomes and supporting research, please see, “Evidence for Afterschool and Expanded Learning.”

---

Most publicly funded programs are accountable to one or more of a range of DC government agencies including the Office of State Superintendent of Education (OSSE), the Deputy Mayor of Education (via Learn 24), and the DC Department of Parks and Recreation. With programs spanning so many different governmental areas, and many programs receiving funding from multiple sources, both public and private, the District does not have a comprehensive directory of all OST options across these agencies, and there is not a current number on the total number of unique youth who participate in OST programs, or who could be served by them.

Additionally, information about programs funded by school budgets are only reported in individual school budgets, not as part of a comprehensive report, which adds to the complexity in establishing a complete picture of all of the programs. However, the most recent report from 2017, completed by the DC Policy Center, estimated 33,400 children and youth in subsidized afterschool programs and 15,000 in summer programs (the vast majority in the Marion Barry Summer Youth Employment Program).

While the purpose of most programs is defined by DC officials, it’s worth noting the intended purpose of the federally-created 21st CCLC program, which is to, “(1) provide opportunities for academic enrichment, including providing tutorial services to help students (particularly students in high-poverty areas and those who attend low-performing schools) meet State and local student performance standards in core academic subjects such as reading and mathematics; (2) offer students a broad array of additional services, programs, and activities, such as youth development activities, drug and violence prevention programs, counseling programs, art, music, and recreation programs, technology education programs, and character education programs, that are designed to reinforce and complement the regular academic program of participating students; and (3) offer families of students served by community learning centers opportunities for literacy and related educational development.”

Of these sources, Learn 24 uses local public funds to provide grants to out-of-school time programs at community-based organizations. The budget for the District of Columbia for Fiscal Year 2021 was $16.9 billion dollars, of which $8.6 billion comes from local funding and the Mayor and DC Council allocated $13.7 million for Learn 24: the Office of OST Grants and Youth Outcomes, or roughly 0.16% of the local budget. Despite increased budget pressures resulting from the pandemic, the FY 2021 budget effectively held Learn 24 harmless, resulting in only a 2% decrease, when adjusted for inflation, from the year’s previous budget. See Annex 1 for specific funding streams.
Each of these funding streams supports programming for children and youth ranging from PreK or kindergarten through high school. Individual program sites generally serve a narrower age range and no DCPS administered 21st Century Learning program serving students older than eighth grade in the pre-pandemic context. Prior to the pandemic, the sources below supported the following number of children and youth.

**21st Century Learning**
- 9,078 participants in FY19

**Learn 24**
- 27,096 seats available in FY19

**DC Department of Parks and Recreation**
- 7,937 youth in summer camp in fiscal year 2019
- 21,438 in Roving Leaders across 4 quarters (likely counting youth multiple times, once per quarter)
- 646 in Break Camp; 479 in Fun Day (programs for days when school is not in session)
- 353 in Enrichment Zone and 979 in Afternoon Access (afterschool programs for ages 6-12)
- It is not clear how many youth are served by the budget item for “Teen Programs”

Please note that the number of unique children served is not counted by DC agencies, so there is some overlap in these numbers as some children are likely in multiple programs (e.g. one afterschool program and one summer program).

Please note that while individual DCPS and charter schools may fund their own programs by pulling from the per pupil funding they receive, federal Title I funds, PTA funds, etc., the size of those budgets and the number of youth served are currently not available and therefore not reflected in this document.
The DC Out-of-School Time Coalition’s mission is to advocate for access to high quality learning opportunities beyond the school day that prepares DC’s youth for success in education, careers, and life.

These programs are an important part of our system of care and education in the District. We are committed to raising the voice of the OST community to strongly encourage District leaders to demonstrate their support by increasing long-term public investments in OST.

**We are made up of dozens of out-of-school time programs from across the District, and are based at DC Action for Children.**
